

LIME

Local Interpretable Model-agnostic Explanation — patient #48, $P(\text{benign})=0.253$, $R^2=0.65$

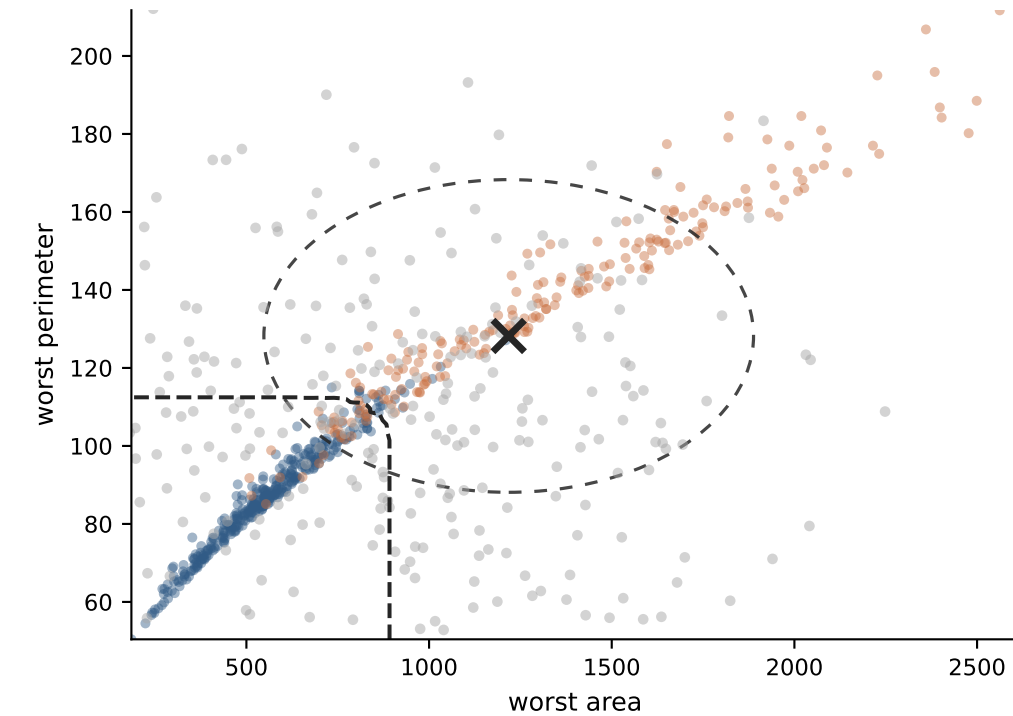

A · the black-box model

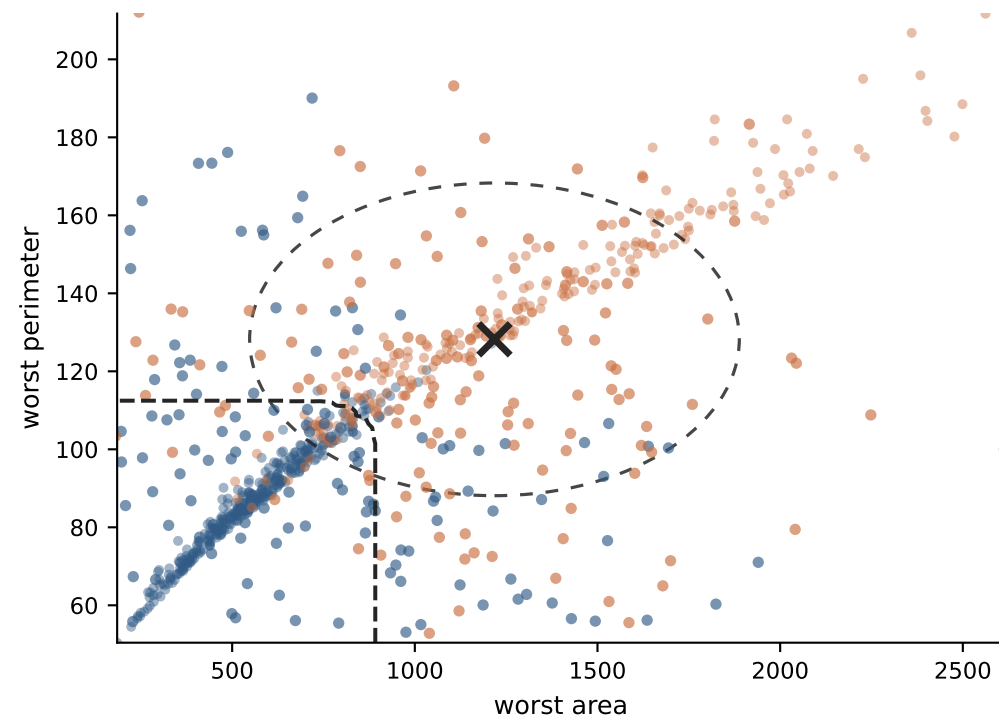

B · the local neighborhood

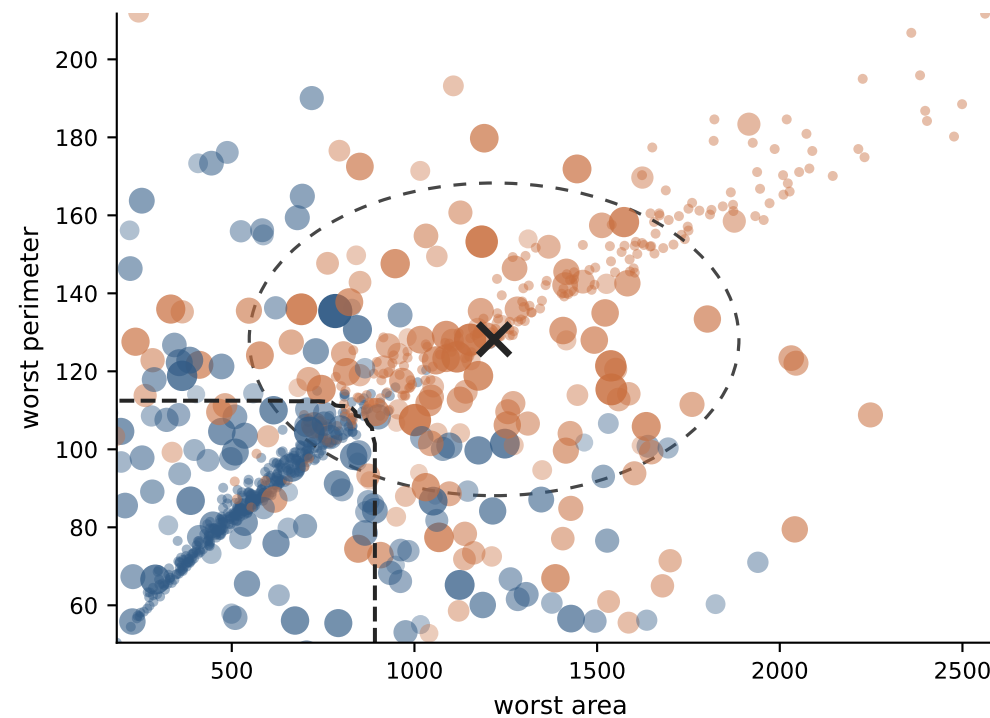

C · perturbation

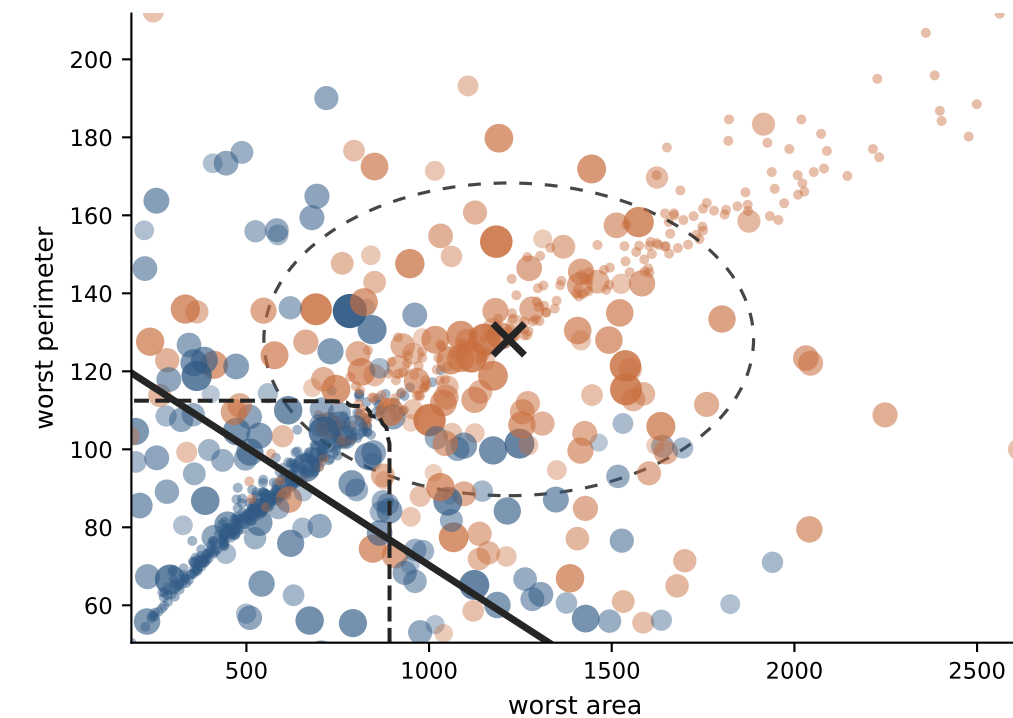

D · predictions on the neighbors

E · proximity weighting

F · the local fit

● benign (true label) ● malignant (true label) - - true boundary ($P=0.5$) - - local neighborhood ✕ patient #48 — local fit (Ridge, $P=0.5$)
